DEPARTMENT OF COMPUTER SCIENCE
AND ENGINEERING CHITKARA
UNIVERSITY, PUNJAB

CERTIFICATE

This is to certify that the project entitled “DevDate – Modern Dating and Social Interaction Platform” has been submitted in partial fulfilment of the requirements for the course .Industry Oriented Hands-on Experience (22CS422)for the degree of Bachelor of Engineering in Computer Science and Engineering at Chitkara University, Punjab, during the academic session 2022–2026.

This project is a bona fide work carried out by:

Souvik Dhar (2210992402)

Subhajit Misra (2210992410)

Koustav Manna (2210991807)

Sayandip Ata (2210992276)

under the guidance of Dr. Rajat Takkar, towards the partial fulfilment of the requirements of the above-mentioned course.

Sign. of Project Guide:

Dr. Rajat Takkar

CANDIDATE'S DECLARATION

We, **Souvik Dhar (2210992402), Subhajit Misra (2210992410), Koustav Manna (2210991807), and Sayandip Ata (2210992276)**, students of **B.E. Computer Science and Engineering, Batch 2022–2026**, Chitkara University, Punjab, hereby declare that our project entitled **"DevDate – Modern Dating and Social Interaction Platform"** is our original work. The platform has been designed and developed to help users connect, interact, and build meaningful social relationships through a modern and user-friendly digital platform. The website includes features focused on social interaction, user engagement, and enhanced connectivity for a seamless experience.

All features, functionalities, and content have been developed by us as part of the course **Advanced Web Design Frameworks & Development (22CS402)**, and this work has not been submitted to any other institution or for any other academic purpose.

`

Place: Chitkara University
Date: May, 2026

ACKNOWLEDGEMENT

It is our pleasure to express our heartfelt gratitude to everyone who directly or indirectly contributed to the successful completion of our project, **"DevDate – Modern Dating and Social Interaction Platform."** Throughout the development of this project, we received constant support, guidance, and encouragement that helped shape our ideas and efforts.We extend our sincere thanks to **Dr. Rajat Takkar** for her invaluable support, motivation, and constructive feedback during the course of the project. Her mentorship played a vital role in helping us stay focused and improve the quality of our work.We are also deeply thankful to Chitkara University, Punjab, for providing us the opportunity to undertake this project as part of the course **Industry Oriented Hands-on Experience (22CS422)** under the Department of Computer Science and Engineering. Last but not least, we express our deep gratitude to the Almighty, our parents, and our friends for their unwavering moral support, encouragement, and valuable suggestions throughout the project journey.

Souvik Dhar – 2210992402
Subhajit Misra – 2210992410
Koustav Manna – 2210991807
Sayandip Ata – 2210992276

Abstract & Keywords:

DevDate: A Modern Dating and Social Interaction Platform

DevDate is a web-based dating and social interaction platform developed to provide users with a modern, secure, and engaging environment for connecting with like-minded individuals. The platform is designed to simplify online social interactions by enabling users to create profiles, discover compatible matches, and communicate seamlessly through an interactive digital experience.

The primary objective of DevDate is to create a user-friendly platform where individuals can build meaningful friendships, relationships, and social connections. The website provides features such as **user registration and authentication, profile creation and customization, match discovery, interactive user interface, and real-time communication functionalities** to enhance engagement and improve the overall user experience.

The platform is developed using modern web technologies with a responsive and visually appealing design to ensure accessibility across multiple devices. The frontend of DevDate is built using **React.js, HTML5, CSS3, and JavaScript**, while backend functionalities are implemented to handle user data management, authentication, and secure interactions. The project also integrates database technologies for efficient storage and retrieval of user information, ensuring scalability and smooth performance.

Special emphasis has been placed on **security and privacy**, including secure login mechanisms, protected user data, session management, and authentication systems to ensure trust and reliability among users. The website is designed to deliver a smooth navigation experience with an intuitive interface, making digital social interaction simple and convenient.

By combining modern web development technologies with social networking concepts, DevDate aims to provide a safe, engaging, and efficient platform for online interaction. The project encourages meaningful communication and helps users connect with others in an innovative and user-centric manner.

1. Introduction to the Project:

In today's digitally connected world, social interaction and relationship building have increasingly shifted to online platforms. With the rapid growth of social networking and online communication, individuals now seek secure, user-friendly, and personalized platforms to connect with like-minded people, form meaningful relationships, and expand their social circles. Traditional methods of meeting new people can often be limited by geographical boundaries, time constraints, or lack of opportunities, creating the need for a smart and centralized digital solution that simplifies social interaction in a safe and engaging environment.

DevDate is a web-based modern dating and social interaction platform designed to fulfill this need. The platform aims to provide users with a seamless, interactive, and personalized environment where they can create profiles, discover compatible individuals, and build meaningful connections. DevDate enables users to explore profiles, interact with others, and engage in conversations through an intuitive and visually appealing interface. Whether users are seeking friendships, networking opportunities, or meaningful relationships, the platform offers an accessible and engaging digital space for communication and interaction.

On the technological front, DevDate is developed using modern web development technologies to ensure high performance, responsiveness, and scalability. The frontend is built using **React.js, HTML5, CSS3, and JavaScript** to provide a dynamic and responsive user experience. The backend is powered by **Node.js and Express.js**, enabling efficient server-side operations and seamless handling of user interactions. User data and platform information are managed securely using database technologies such as **MongoDB**, ensuring efficient storage, fast retrieval, and scalability for future growth.

Security and privacy are among the core priorities in the development of DevDate. The platform incorporates **secure user authentication, encrypted password handling, session management, and protected user data mechanisms** to establish a trustworthy environment for users. The responsive design ensures smooth accessibility across multiple devices, allowing users to interact conveniently from desktops, tablets, or mobile devices.

1.1Background:

– In today's digital era, social interaction and relationship building are increasingly influenced by technology and online communication. Traditional ways of meeting new people are often limited by geographical barriers, busy schedules, and reduced opportunities for social engagement. As a result, individuals are increasingly seeking digital platforms that can help them build meaningful connections in a convenient, safe, and personalized manner.

With the widespread use of smartphones, internet accessibility, and modern communication technologies, users now prefer online platforms that provide seamless interaction, personalized recommendations, and secure communication. However, many existing social and dating platforms face challenges such as poor user experience, lack of personalization, privacy concerns, fake profiles, and limited meaningful engagement. These issues create the need for a secure, efficient, and user-friendly platform that encourages genuine social interaction and relationship building.

DevDate addresses these challenges by providing a modern, interactive, and user-centric dating and social interaction platform that centralizes communication and user engagement features in a single environment. By enabling users to create personalized profiles, explore compatible matches, and communicate effectively, DevDate simplifies the process of building friendships, relationships, and professional or social networks.

Problem Statement:

In today's digital world, individuals often face challenges in building meaningful social connections due to limited opportunities, busy lifestyles, geographical barriers, and the lack of safe and reliable communication platforms. Many existing social networking and dating applications provide fragmented experiences, poor personalization, privacy concerns, and limited meaningful engagement, making it difficult for users to establish genuine relationships.

Moreover, many current platforms fail to provide personalized recommendations based on user preferences, interests, and compatibility. Generic suggestions often lead to irrelevant matches, reduced engagement, and unsatisfactory user experiences. Without an effective system for meaningful interaction, users may struggle to connect with like-minded individuals or build authentic relationships. Another major issue is the concern regarding **privacy, security, and trust**. Many users hesitate to engage on digital social platforms due to fake profiles, data privacy risks, and insecure communication systems. The absence of secure authentication and protected user information can negatively impact user confidence and platform reliability.

Additionally, several platforms lack an intuitive and user-friendly interface, making navigation and communication complicated. Limited accessibility, slow responsiveness, and poor user experience can discourage meaningful social interaction and reduce overall satisfaction among users.
DevDate aims to address these challenges by developing a modern and integrated dating and social interaction platform that centralizes communication, profile management, and user engagement features into a single environment. The platform provides **personalized profile recommendations**, allowing users to discover compatible individuals based on shared interests, preferences, and interaction patterns, thereby enhancing relevance and user engagement.
The platform also incorporates **secure authentication systems, privacy protection mechanisms, and user data security features** to ensure a safe and trustworthy environment for communication. By integrating responsive design, interactive interfaces, and seamless functionality, DevDate improves accessibility and user convenience across multiple devices.
.

2. Software and Hardware Requirements:

3.1 Technology Stack

• Frontend:

• Next.js:
DevDate is developed using **Next.js**, a modern React-based framework that supports both **client-side and server-side rendering**, ensuring improved performance, faster page loading, and a smooth user experience. Next.js enhances scalability, routing, and responsiveness, making the platform efficient and accessible across different devices.

• Tailwind CSS:
The platform is integrated with **Tailwind CSS**, a utility-first CSS framework that enables rapid and consistent UI development. Tailwind CSS helps create a clean, responsive, and visually appealing user interface by minimizing repetitive styling code and improving maintainability. This ensures that DevDate delivers a modern and user-friendly experience optimized for desktops, tablets, and mobile devices.

• Backend:

• Node.js:
DevDate uses **Node.js**, a fast and scalable JavaScript runtime environment for server-side development. It ensures efficient request handling, better performance, and seamless communication between the frontend and backend systems.

• Express.js:
The backend functionality is implemented using **Express.js**, a lightweight and flexible web framework for Node.js. Express.js simplifies **routing, middleware integration, API handling, and server-side logic**, enabling secure and efficient communication within the platform.

• Database:

• NeonDB (PostgreSQL):
DevDate utilizes **NeonDB**, a fully managed, cloud-native **PostgreSQL database**, for secure and efficient storage of user data, profiles, authentication details, and platform-related information. The database ensures high scalability, reliability, and optimized performance for modern web applications.

• Prisma ORM:
The platform integrates **Prisma ORM**, which seamlessly connects with NeonDB and simplifies database operations, including efficient querying, schema management, and secure data manipulation. Prisma improves development efficiency and ensures structured data handling throughout the platform.

• Authentication & Security:

• Authentication System:
DevDate includes secure **user authentication and session management** to protect user accounts and personal information. Authentication mechanisms ensure a safe and trusted environment for social interaction and profile management.

• Deployment & Hosting: • Modern Cloud Deployment:**The application designed to support deployment on modern cloud platforms, ensuring** scalability, performance optimization, and high availability **for a growing user base Top of ForBottom of For**

Software Development Lifecycle (SDLC):

DevDate follows the Agile Software Development Life Cycle (SDLC) approach, ensuring iterative development, continuous feedback, and collaborative improvements throughout the project lifecycle. The following phases were followed during the development of the platform:

1. Concept / Inception

• **Purpose:** Identify the project objective and define the vision of the platform.

• **Activities:**

- Define the goals and scope of the **DevDate – Modern Dating and Social Interaction Platform**.
- Identify target users and stakeholders.
- Analyze feasibility, project requirements, and potential risks.
- Establish the purpose of providing a secure and user-friendly platform for social interaction and relationship building.

2. Requirement Gathering & Analysis

• **Purpose:** Collect and analyze detailed functional and non-functional requirements.

• **Activities:**

- Gather user requirements and define system functionalities.
- Identify features such as **user authentication, profile creation, profile matching, chat systems, and personalized recommendations**.
- Create a product backlog for feature prioritization.
- Define the **Minimum Viable Product (MVP)** requirements.

3. Design

• **Purpose:** Design the system architecture and user experience.

• **Activities:**

- Create **wireframes, UI/UX designs, and responsive layouts** for an engaging interface.
- Design frontend and backend architecture using **Next.js, Node.js, and Express.js**.
- Plan APIs and database schema for managing **user profiles, authentication, preferences, and interactions**.
- Ensure responsive design compatibility across devices.

4. Development

• **Purpose:** Build the platform incrementally using Agile sprints.

• **Activities:**

- Develop platform features in iterative development cycles.
- Implement functionalities such as **user registration, login, profile management, match discovery, and interaction systems**.
- Use **Git/GitHub** for version control and collaborative development.
- Integrate frontend and backend modules continuously.

5. Testing

• **Purpose:** Ensure functionality, security, and product stability.

• **Activities:**

- Conduct **unit testing, integration testing, and UI testing**.
- Test user authentication, profile management, and platform responsiveness.
- Identify and fix bugs through manual and iterative testing.
- Improve performance and usability based on feedback.

6. Deployment

• **Purpose:** Deploy the application for accessibility and real-world usage.

• **Activities:**

- Deploy the application to a cloud hosting environment.
- Configure database integration and backend services.
- Optimize performance for scalability and accessibility.
- Ensure stable production deployment.

7. Review & Feedback

• **Purpose:** Evaluate progress and identify improvements.

• **Activities:**

- Review completed features and demonstrate system functionality.
- Gather user and team feedback regarding interface and usability.
- Improve future development iterations based on suggestions.
- Analyze user experience for feature enhancements.

8. Maintenance

• **Purpose:** Ensure continuous system improvement and smooth functioning.

• **Activities:**

- Monitor system performance, bugs, and security vulnerabilities.
- Release updates, bug fixes, and feature improvements.
- Improve user experience based on changing requirements.
- Continuously optimize platform functionality and performance.

By following the **Agile SDLC model**, DevDate ensures flexibility, continuous enhancement, better collaboration, and the ability to adapt quickly to user needs while maintaining a secure and engaging social interaction platform.

Database Design & Schema:

Users Collection

- Stores registered user information for individuals using the platform.
- Fields include: name, email, password (hashed), gender, age, bio, interests, profile image, location, role, timestamps.
- Supports role-based access (admin vs regular user).
- Stores authentication and profile-related information for personalized matching.

User Profiles Collection

- Contains detailed profile information and user preferences.
- Fields include: relationship preferences, hobbies, about me, profile visibility, occupation, interests, age preferences.
- Helps provide personalized recommendations and improve compatibility matching.

Matches / Connections Collection

- Stores information about user interactions and matching requests.
- Fields include: sender user reference, receiver user reference, match status (pending, accepted, rejected), timestamps.
- Helps manage social connections and relationship-building interactions.

Messages / Chat Collection

- Stores communication between connected users.
- Fields include: sender reference, receiver reference, message content, message type, timestamp, read status.
- Supports secure and seamless real-time or stored communication.

Likes / Favorites Collection (Optional)

- Keeps track of profiles liked or saved by users for future interaction.
- Fields include: user reference, liked profile reference, timestamps.
- Enhances user engagement through personalized interaction history.

Authentication / Session Collection

- Manages secure login sessions and user authentication tracking.
- Fields include: user reference, login time, logout time, device information, session status.
- Helps maintain secure user sessions and account activity tracking.

Schema Relationships

- User ↔ User Profile: One-to-One
- User ↔ Matches/Connections: One-to-Many
- User ↔ Messages: One-to-Many
- User ↔ Likes/Favorites: One-to-Many
- User ↔ Authentication Sessions: One-to-Many
- User ↔ Chat Messages: Many-to-Many (through messaging system)
- Relationships are maintained using database references and relational mapping for
- efficient data handling and retrieval.

Performance & Security

- Indexes are applied on fields such as email, username, interests, and location for faster search and optimized query performance.
- Passwords are securely stored using hashing and encryption mechanisms.
- Timestamps (createdAt, updatedAt) are included across major collections for tracking and analytics.
- Data validation and schema constraints are enforced to maintain database consistency and reliability.
- Secure authentication and protected APIs ensure privacy, user trust, and data protection.

4. Program's Structure Analyzing and GUI Constructing (Project Snapshots)

4.1 Program's Structure Analyzing and GUI Constructing

The program structure of DevDate is analyzed to define core modules such as user authentication, profile management, personalized matching, social interactions, and communication systems. Based on these modules, a responsive and user-friendly Graphical User Interface (GUI) is constructed using Next.js and Tailwind CSS, ensuring smooth navigation, attractive design, and an engaging user experience. The platform follows a modular structure where frontend components dynamically interact with backend services, enabling seamless data management and real-time responsiveness across multiple devices. The interface is designed to enhance accessibility, usability, and interaction efficiency.

1. User Authentication & Login Section

• Core Features:

- Login & Registration Forms: A secure interface for users to create accounts and log in to the platform.
- Authentication Validation: Validates email, password, and user credentials with proper error handling.
- Secure Session Management: Maintains authenticated user sessions for uninterrupted access.
- User-Friendly Interface: Clean and responsive forms with guided user interactions.

• Functionality:

- Connected to the database through backend APIs for authentication and account management.
- Uses secure authentication mechanisms to verify user credentials.
- Provides instant validation feedback for incorrect credentials or incomplete forms.
- Utilizes frontend state management to update authentication status dynamically.

2. Profile Discovery & Match Section

• Core Features:

- Profile Browsing: Users can explore profiles based on preferences and interests.
- Personalized Match Suggestions: Dynamic recommendations based on compatibility and profile information.
- Search & Filter Features: Allows users to refine profiles using preferences and interests.
- Interactive Profile Cards: Responsive UI for better profile exploration.

• Functionality:

- Retrieves profile data dynamically from the database.
- Displays recommendations using filtering and matching logic.
- Updates results in real time based on user interactions and preferences.

3. Chat & Social Interaction Section

• Core Features:
- Messaging System: Allows users to communicate securely.
- Interactive Communication: Supports meaningful social engagement.
- Real-Time Updates: Ensures smooth conversation flow.
- Responsive Interface: Optimized for mobile and desktop devices.

• Functionality:
- Connected with backend APIs and database systems for message handling.
- Dynamically updates conversations and interaction history.
- Provides a seamless communication experience across devices.

2.1 Code Implementation

useAuth.tsx 3

src > hooks > useAuth.tsx > ...

```typescript
import { createContext, useContext, useEffect, useState, ReactNode } from "react";
import { Session, User } from "@supabase/supabase-js";
import { supabase } from "@/integrations/supabase/client";

interface AuthContextValue {
  user: User | null;
  session: Session | null;
  loading: boolean;
  signOut: () => Promise<void>;
}

const AuthContext = createContext<AuthContextValue>({
  user: null,
  session: null,
  loading: true,
  signOut: async () => {},
});

export const AuthProvider = ({ children }: { children: ReactNode }) => {
  const [session, setSession] = useState<Session | null>(null);
  const [user, setUser] = useState<User | null>(null);
  const [loading, setLoading] = useState(true);

  useEffect(() => {
    const { data: { subscription } } = supabase.auth.onAuthStateChange((_event, s) => {
      setSession(s);
      setUser(s?.user ?? null);
      setLoading(false);
    });

    supabase.auth.getSession().then(({ data: { session: s } }) => {
      setSession(s);
      setUser(s?.user ?? null);
      setLoading(false);
    });

```

utils.ts 2 setup.ts 1

src > test > setup.ts > ...

```typescript
import "@testing-library/jest-dom";

Object.defineProperty(window, "matchMedia", {
  writable: true,
  value: (query: string) => ({
    matches: false,
    media: query,
    onchange: null,
    addListener: () => {},
    removeListener: () => {},
    addEventListener: () => {},
    removeEventListener: () => {},
    dispatchEvent: () => {},
  }),
});

```

Advantages and Disadvantages:

4.1 Advantages

- **Improved User Experience**
  - DevDate provides a **clean, interactive, and user-friendly interface** that enables users to easily create profiles, discover connections, and interact with others.
  - The platform simplifies online social interaction through intuitive navigation and responsive design, reducing complexity and improving accessibility.
- **Personalized Match Recommendations**
  - The system offers **personalized profile suggestions** based on user interests, preferences, and profile information.
  - This improves the relevance of recommendations and enhances meaningful user engagement.
- **Faster and Convenient Social Interaction**
  - Users can quickly **discover profiles, send likes, and communicate** without navigating through multiple complicated interfaces.
  - Streamlined communication features improve efficiency and accessibility.
- **Secure Authentication and Privacy**
  - DevDate includes **secure login authentication, encrypted passwords, and protected user sessions**, ensuring user trust and data safety.
  - Privacy-focused mechanisms reduce security concerns related to online interaction.
- **Dynamic and Interactive User Engagement**
  - The platform supports **real-time profile exploration, messaging, and interaction**, making communication more engaging and seamless.
  - Dynamic content updates improve responsiveness and user experience.
- **Mobile-Friendly and Responsive Design**
  - The interface is designed to work efficiently across **mobile phones, tablets, and desktops**, ensuring accessibility from any device.
  - Responsive layouts improve usability for users on smaller screens.
- **Encourages Meaningful Connections**
  - Users can connect with **like-minded individuals** based on shared interests and compatibility.
  - The platform promotes genuine interaction and relationship building in a structured digital environment.
- **Scalable Architecture**
  - Built using **Next.js, Node.js, Express.js, Tailwind CSS, and NeonDB**, the platform supports scalability for future growth and feature expansion.

4.2 Disadvantages

1. Privacy and Security Concerns

- Since the platform handles personal information and user interactions, there is always a risk of **privacy breaches or unauthorized access** if security measures are not continuously updated.
- Fake profiles or misuse of information may affect user trust.

2. Dependency on Internet Connectivity

- DevDate is a **web-based platform**, meaning users require a stable internet connection for profile browsing, communication, and interaction.
- Poor connectivity may affect platform responsiveness.

3. Limited Match Accuracy

- Match recommendations depend on the **quality of user-provided information and preferences**.
- Incomplete or inaccurate profiles may result in less relevant suggestions.

4. Risk of Fake Profiles

- Some users may create **misleading or fake profiles**, affecting authenticity and meaningful engagement.
- Additional verification mechanisms may be required for improved trust.

5. Performance Issues with Growing User Base

- As the number of users increases, **database queries and real-time interactions** may require optimization for maintaining performance.
- Without proper indexing and scalability improvements, response times may slow down.

6. Limited Personalization for New Users

- New users may initially receive **less accurate recommendations** until sufficient profile details and interaction history are available.
- This may temporarily reduce user engagement.

7. Mobile Interface Challenges

- Although responsive, some advanced features or chat interfaces may become **slightly limited on smaller screens** if not optimized properly.

8. Security and Validation Risks

- Without proper **input validation, authentication, and data sanitization**, the system may become vulnerable to attacks such as unauthorized access or malicious inputs.
- Continuous monitoring and updates are necessary to maintain system integrity.

Conclusion

The **DevDate platform** serves as an essential digital solution for modern social interaction and relationship building, providing users with a secure, interactive, and user-friendly environment to connect with like-minded individuals. By enabling features such as **user authentication, profile management, personalized matching, and seamless communication**, DevDate enhances the overall user experience and simplifies the process of building meaningful social connections.

The platform's **responsive interface, personalized recommendations, and secure backend integration** contribute significantly to usability, engagement, and accessibility. With its modern design and efficient system architecture, DevDate ensures smooth navigation and interaction across different devices, making social networking more convenient and engaging for users.

Overall, DevDate successfully fulfills its objective of creating a **scalable, secure, and user-centric social interaction platform**, helping users build genuine relationships while ensuring privacy, convenience, and a seamless digital experience.

Future Scope

The **DevDate platform** has substantial potential for future improvements and feature expansion to further enhance user experience, engagement, and security. Future enhancements may include the integration of **Artificial Intelligence (AI)-based matchmaking systems** to provide more accurate and personalized recommendations based on user behavior, interests, and compatibility analysis.

Advanced features such as **real-time video calling, voice messaging, and enhanced chat systems** can improve communication and foster stronger interactions among users. The platform can also integrate **location-based matching and smart recommendations** to help users discover nearby connections while maintaining privacy and security controls.

Additional improvements such as **profile verification systems, fake account detection, and advanced privacy settings** can strengthen trust and user authenticity. Integration of **multilingual support** can make the platform more accessible to a wider audience, improving inclusivity and global reach.

Furthermore, DevDate can incorporate **behavior-based suggestions, social event recommendations, and enhanced personalization techniques** to create a more engaging and intelligent user experience. These future upgrades will make the platform more innovative, secure, and aligned with the evolving needs of digital social interaction and relationship building.
